Art Unit: 1724

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The disclosure is objected to because of the following informalities: On page

17 “____liters”, and on page 19 “____” fail to describe the invention in full, clear, concise, and exact terms. On page 19 of the specification “turbudity” is erroneous, and should be changed to – turbidity -. Appropriate correction is required.

Applicants are warned against the use of new matter in any amendment.

Claims 5 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 5 and 13 “said third reaction tank” lacks clear antecedent basis.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Rice 2,640,807. It is submitted that Rice (see col. 4 line 24 through col. 8 line 2) appears to show the structure of the system recited in the instant claims. It is submitted that outer shell 90 in settling tank C appears to include the structure of the instant reaction tank.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1724

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rice as applied above, and further in view of the Admitted Prior Art disclosed on pages 6 and 7 of the instant specification. The claims differ from Rice as applied above by reciting that the system includes a specific holding tank, reaction tank, effluent collection tank, and storage tank. The Admitted Prior Art discloses that it is known in the art of water treatment to include the recited tanks, to aid in controlling the flow of wastewater to a reaction tank, precipitating particles from the wastewaters, and collecting and storing effluent from a clarifier. It would have been obvious to one skilled in the art to modify the system of Rice by including the recited tanks in view of the Admitted Prior Art, to aid in controlling the flow of wastewater to the reaction tank, precipitating particles from the wastewaters, and in collecting and storing effluent from the clarifier. The use of a third collection tank would have been an obvious matter of choice in engineering design to one skilled in the art, depending on the specific wastewater treated and results desired, absent a sufficient showing of unexpected results.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Applicant's election without traverse of Group I, claims 1-16 in the reply filed on 5/6/05 is acknowledged. The restriction requirement is made final.
